Recycling of trees and plants (woods)

We produce high-quality sawdust from cut-down trees only.

A large volume of trees and plants (woods) are generated as waste from lumbering, construction or pruning at home. Sawdust is produced after removal of impurities by heavy machines and hand from such waste, and mechanical stabilization through single-shaft shredders and trommels. Our high-quality sawdust is made from cut-down or trimmed trees and plants only. Since construction waste is not used, the sawdust can be used for agriculture without concern.

Contact us!

Feel free to contact us and we will be happy to visit even private homes if you are:

- 1 looking for a lumbering and authorized disposal contractor.
- 2 looking for sawdust for farming/compost plants.
- 3 having trouble in disposing of cut-down trees and plants from your garden.
