

03

Industrial Waste: Intermediate Treatment

90% of the industrial waste brought in for intermediate treatment is recycled.

Nearly 90% of the designated items are recycled through shredding or incineration, and thus waste is reduced before final disposal.

Shredder

Waste incinerator

04

Industrial Waste: Final Disposal Site (Least-Controlled Type)

Final disposal site with the largest-capacity (1 million m³) in the southern region of Okinawa's main island

Areas of Industrial Waste/Specially-Controlled Industrial Waste Collection

Plastic waste (including asbestos-containing industrial waste), metal waste, waste glass/concrete/ceramic (including asbestos-containing industrial waste), debris (concrete debris and asphalt debris, including asbestos-containing industrial waste). (With the exception for specially-controlled industrial waste.)
