

## Efforts for Environmental Activities

### Eco Action 21

Eco Action 21 Certification/Registration System is a method designed for various kinds of business entities such as small and medium businesses, schools, and public institutions. The intention is to establish, manage and maintain a system of efficient and effective environmental efforts, to set environmental targets, and take action by gathering results, evaluations and reports. The scheme is based on the Eco Action 21 Guidelines drawn up by the Ministry of the Environment.

### Environmental Philosophy

Machiclean once again recognizes that it is our company's mission "to protect and create the environment." We will continue to commit ourselves to stabilize the global environment through community efforts such as recycling of wastes, conservation of resources and planting, so that we can contribute to the creation of a society where the next generation can have hopes and their dreams come true.

### Guidelines for Environmental Actions

- 1 We will efficiently use resources and reduce the amount of final disposal by improving recycling rates in our operations.
- 2 We will reduce the use of fuels, electricity, water and gas as much as possible, and restrain the creation and discharge of industrial and general wastes.
- 3 We will nurture responsible individuals fully aware of the environment, and abide by environmental laws and regulations relevant to our operations.
- 4 We will participate in clean-up activities in the community, and maintain a good relationship of trust.
- 5 The Guidelines for Environmental Actions confirm that every staff member has learnt, understood, agreed with, and promised to comply with these guidelines, and therefore we will assure accuracy and availability of information.

### Program to promote advanced Product Green Performance

It is a method to evaluate, in a quantitative way, input resources, environmental burdens, and environmental ramifications on the planet and the eco systems.

### Carbon Footprint Systemce

Carbon Footprint System is a mechanism to indicate greenhouse gases in Co2 volume that are emitted over the lifecycle of a product or a service from material procurement to disposal and recycling so that such information on each product/service is easy to understand.

### Volunteer Activitiecese

Community Clean-ups: We conduct clean-ups several times a month.
